

# VISHVAJIT RAO

## DATA ENGINEER

Noida, Uttar Pradesh

+917355383533

vishvajitrao@gmail.com

---

## PROFILE SUMMARY

Passionate Data Engineer with 6.5+ years of expertise in **Python, SQL, ETL Pipeline, Data Analytics**, and Cloud computing ( **AWS** ) also Responsible for developing Python applications ( Web application and REST APIs ) using Django, Flask, and FastAPI that communicate with Databases ( **PostgreSQL, MySQL, SQL Server, Redshift, etc** ) and also developing **Data Pipelines** using **PySpark** to perform **ETL** operations.

---

## SKILLS

- Python Programming Language
- StreamLit, Langchain, Vector Database,RAG
- Python Asynchronous Programming
- Spark ( PySpark ), Pandas
- Django, Django Rest Framework, Flask, FastAPI
- Django ORM, SQLAlchemy
- MySQL, PostgreSQL, SQL Server, Snowflake
- AWS ( EC2, Lambda, API Gateway, RDS, S3, SES, SNS, Glue, Athena, Redshift )
- Linux ( Ubuntu )
- PyCharm, VS Code, DBeaver, Jupyter Notebook, Anaconda

## EDUCATION

### **BBD University, Lucknow**

- BCA ( Bachelor of Computer Application )  
July, 2016 - July, 2019

### **Intermediate ( 12th )**

### **High School ( 10th )**

---

# WORK EXPERIENCE

## Technical Lead

HCLTech — Data Engineering | BlackRock Client

9 April - Present

- Engineered and automated end-to-end dataset onboarding workflows on **BlackRock Aladdin Data Cloud (ADC)** across Snowflake and **Aladdin Studio**, ensuring seamless integration of new datasets into the enterprise data ecosystem.
- Developed a **Streamlit-based SQL query platform** enabling teams to execute and analyze ad-hoc queries across **100+ BlackRock Snowflake accounts**, significantly simplifying cross-account data exploration and reducing manual operational effort.
- Designed and developed an end-to-end **Streamlit-based AI Agent** to automate production release checkout/validation, integrating AI-driven analysis with existing release workflows to improve operational efficiency and reduce manual verification.
- Developed a **Python-based Schema Drift Detection** and reporting framework across 100+ BlackRock Snowflake accounts, automating identification of schema changes and improving data quality, consistency, and governance.
- Engineered an automated **ADC Metadata Drift** reporting solution across **100+ BlackRock Aladdin Studio** environments, detecting metadata inconsistencies and providing actionable reports for data governance and platform reliability.
- Implemented end-to-end dataset onboarding automation for **BlackRock EDP** using Apache Airflow, designing workflows for data ingestion, validation, dependency management, and operational monitoring.
- Built reusable Python automation frameworks for enterprise-scale data-platform operations, replacing repetitive manual processes with scalable and maintainable solutions.
- Collaborated with data engineering, platform, and application teams to troubleshoot dataset onboarding, schema/metadata inconsistencies, SQL execution, and production deployment issues within BlackRock's data ecosystem.

## Data Engineer

BluEnt eSolutions Pvt Ltd, Delhi

22 July 2022 - 7 April 2025

- Build a **Python, PySpark** Data pipeline to ingest data from **Teramind REST API** to SQL Server database.
- Design an AWS Quicksight Dashboard to represent the employee's activity and performance within an organization.
- Build an ETL solution to ingest data from **Zoho Book REST API** to the **Snowflake** data warehouse for BI tool ( Amazon QuickSight ).
- Developed and maintained a Data pipeline to ingest data from different flat files ( CSV ) using **PySpark, S3, Lambda, SES**, and **EC2** Instance.
- Written and maintained complex SQL queries to generate Reports for Sales data.
- Pulled data from SQL Server and dumped it into Another SQL server database using AWS Glue ETL Job for BI ( AWS Quicksight ).

## Python Developer

Nuage Biz Tech, Noida

Feb, 2021 - July, 2022

MovTek – A Third party logistics provider

- Developed a flexible, scalable, and robust REST APIs which capable of handling millions of hits using Python **FastAPI** web framework.
- Implemented **AWS Cognito** for user sign-in and sign-up operations.
- Used **AWS S3** service to upload files on the S3 storage.
- Implemented **AWS SES** service to send an email on different-2 actions.
- Integrate **Stripe Payment** gateway to accept online payment.
- Used AWS RDS Postgres Database as a database in this application.
- Implemented SQLAlchemy ORM ( **Object Relation Mapping** ) to make communication between application and database
- Used **boto3 Python SDK** (Software Development kit ) to access AWS services.
- Deployed application on **AWS EC2** instance.

## Python Developer

Nuage Biz Tech, Noida

CROCS – Singapore Based Survey Application

- Developed flexible, scalable, and robust REST APIs which are capable of handling millions of hits using Python **Flask** micro web framework.
- Implemented **Azure AD** for user login and sign-up operations.
- Used MS azure blob storage service to upload files on the **Azure blob storage**.
- Implemented one signal to send push notifications to the user on different-2 actions.
- Used **Azure Function** ( Serverless Computing ) to deploy all the APIs.

- Used MS SQL Database as a database in this application.
- Implemented SQLAlchemy ORM ( Object Relation Mapping ) to make communication between application and database.
- Used PyCharm IDE to develop the application and Visual Studio Code to deploy the application on the Azure function.

## Python Developer

Jiyo India, Noida

Oct, 2019 - Feb, 2021

WindPact – US based third party material provider

- Developed flexible, scalable, and robust REST APIs which are capable of handling millions of hits using Python Django and Django rest framework.
- Implemented AWS Cognito for user login and sign-up operations.
- Implemented **AWS S3** service to upload files on the S3 storage.
- Used **AWS RDS** Postgres Database as a database in this application.
- Used Django ORM ( **Object Relation Mapping** ) to fetch information from the database.
- Used **boto3** Python SDK (Software development kit) to access AWS services.
- Deployed application on **AWS EC2** instance.

## Python Developer

Jiyo India, Noida

Sokin – Card ( Debit and Credit ) Management Application

- Used **Django** and **Django rest Framework** to build APIs that that capable of handling millions of hits at a time.
- Designed and managed multi-user control panel dashboard using Django for user's content analysis.
- Integrate third-party APIs ( Sokin ) to get data.
- Implemented **Azure AD** ( Active Directory ) for user authentication.
- Implemented **AWS S3** service to upload files on the S3 storage.
- Used **AWS RDS** Postgres Database as a database in this application.
- Used Django ORM ( **Object Relation Mapping** ) to fetch information from the database.
- Used **boto3 Python SDK** ( Software Development Kit ) to access AWS services.
- Deployed application on **AWS EC2** instance.
